

Guidelines on $\text{\LaTeX 2}_{\epsilon}$ using for PhD Thesis

Minimum requirements regarding thesis format before submission

- Page format: 170 mm x 240 mm.
- Margins – top, bottom, right, left: Not less than 1,5 cm.
- Page number and header: Placed centrally top and bottom (make sure they are 100% black - see Black colors below).
- If you use the LaTeX template, remember to check whether the header, numbers etc. is in 100% K(eycolor) - see “Black colors” below.
- Font type: If fonts are not embedded use only standard fonts (e.g. Arial, Verdana, Times New Roman, Minion Pro, Baskerville, Garamond etc.).
- Colophon: Fill in as much as you can. The rest is filled in by the university.
- You are welcome to include a page with an author CV, preferably with picture
- You can also include a back cover text when you submit the thesis in Pure/VBN. Maximum 1200 keystrokes (no spacing).
- Please notice that every chapter must start on a right-hand page.
- If you want your own picture on the cover, please submit a photo in Pure. Photo size: 17.5 cm x 8.5 cm in 300 dpi.

Hyphenation

Please do a thorough check of the thesis page by page to ensure a proper hyphenation. For additional info see [wikibooks](#).

CMYK color model

All text and figures should be in the CMYK color model.

Images/photos

Images in RGB should be converted to CMYK using for instance [rgb2cmyk.org](#) or [convert cmyk.bat](#). For more info see [stackoverflow: how-do-i-make-sure-images-are-cmyk](#).

Note that PNG or Portable Network Graphic format is a graphic file format that uses lossless compression algorithm to store raster images. It is frequently used as web site images rather than printing as it supports only the RGB color model. So CMYK color images cannot be saved as PNG image.

Text in color

It is recommended not to use colors for text. However, if you want to use colors they must use the CMYK model. If you use fontspec, for font definitions, using the [Color=...] options as fontspec doesn't support CMYK colors. Instead you will need to use the \color command from xcolor instead. For more information see for instance [stackoverflow: pdf-colour-model-and-latex](#).

Black colors

Please ensure that black colors are truly black and not a dark gray tone, i.e. black text including headers and footers should be 100% K(eycolor). This goes for both text and figures.

Include fonts in the PDF

Please make sure that all fonts are embedded in the PDF. To check this using the normal Adobe Reader (or Foxit if you prefer) select *File - Properties*, on the resulting Dialog choose the *Font* tab. You will see a list of fonts. The ones that are embedded will state this fact in () behind the font name. For more information see [stackoverflow: how-to-nd-out-which-fonts-are-referenced-and-which-are-embedded-in-a-pdf](#).

If the fonts are not embedded: Using pdflatex to create a PDF from LaTeX make sure pdfTeXDownloadBase14 is set to true in the updmap config file. For more information see chapter “3. LaTeX => PDF” in [EmbedLaTeX-fonts.pdf](#).

Additional information on the subject:

[how-to-embed-fonts-at-compile-time-with-pdflatex](#)

[getting-pdflatex-to-embed-all-fonts](#)

How to embed missing fonts in PDF

If you need to include a PDF in your thesis where the fonts are missing please have a look at some of the resources below.

[prepressure.com: Fonts in PDF files](#)

[Stackoverflow: how-do-i-embed-fonts-in-an-existing-pdf](#)

Graphics

- Make sure that no lines have a thickness less than 0.15 points.
- Images should be approximately 300 dpi but no more than 400 dpi.

REMEMBER to open your PDF and do a check of the thesis – page by page – before you submit it in Pure.
